Address:

**A Coruña**

Price:

**280 Euros €**

## Applications

Sealing propeller shafts and rudderstocks for the following marine uses; boat building, boat repair, charter fleets, fishing boats, hire craft and owner retrofits

## Self Adjusting

These seals automatically compensate for face wear, and unlike gland packing, do not require any adjustment

## No Shaft Wear

The Manecraft seal rotates with the propeller shaft, and therefore cannot cause wear of the shaft surface

## Maintenance Free

Once fitted, the seal does not require any maintenance, although a regular inspection should be made in common with other hull fittings below the waterline

## Emergency Safety Seal with Tamper Proof Tag

The red tag is designed to prohibit accidental use of the Emergency Safety Seal until required
