Price:

700 Euros €

BULFL1612, Bullflex used in good condition, a few hours, good rubber, painted green volvo 1.5 inch shaft 38mm

The Vetus Bullflex Coupling has been specially designed to ensure optimum damping of vibration, with excellent ease of installation.

Its pre-tensioned rubber element ensures low-noise and vibration-free transmission, without backlash between the engine and the propeller shaft.

Another strong point of the Bullflex coupling is the excellent alignment; even with a misalignment of 2°, the shaft will remain perfectly centered.

ADVANTAGES OF THE VETUS BULLFLEX COUPLING:

Very high flexibility

Optimum damping of vibrations

Secured against shearing off (axially and radially)

Misalignment of up to 2° permissible

Excellent centering of the shaft, allowing for high shaft revolutions, even at 2° misalignment
